SE Lab 4 - Vibe Coding
Antigravity Gemini Chat History

User

I am working on a High-Low card predictor game. Go through the code repo and the Readme file and understand them.

The 1st task is to fix the card rank comparison bug.

Face cards and tens behave inconsistently during higher/lower evaluations. Ensure that card comparisons follow actual numerical values rather than alphabetical ordering so all card values evaluate in their true order.

Update the logic for comparision.

Tool: `view_file`

`file:///Users/ronak/PES_progs/5th_sem_progs/SE_LAB/Lab 4 Vibe Coding/SE_Card_predictor/game/game_engine.py`

Tool: `code_edit`

[Code Edit] file:///Users/ronak/PES_progs/5th_sem_progs/SE_LAB/Lab 4 Vibe Coding/SE_Card_predictor/game/game_engine.py Use numeric_rank instead of rank_str for evaluating card comparisons

I have updated `game_engine.py` to fix the card rank comparison bug.

The evaluation logic now uses `numeric_rank` instead of `rank_str`, which ensures that the card comparisons follow their actual numerical values rather than their alphabetical ordering.

You can test the game to see if face cards and tens behave consistently now! Let me know if you would like me to work on the next task.

User

The 2nd task is to Implement Consecutive Win Streak Multipliers

Correct predictions currently award only a flat score increase with no reward for extended winning runs. Implement a streak tracker that rewards consecutive correct guesses with escalating score multipliers, resetting the bonus back to baseline on an incorrect pick.

Update the code to implement this fetaure.

Assistant

Tool: `code_edit`

[Code Edit] file:///Users/ronak/PES_progs/5th_sem_progs/SE_LAB/Lab 4 Vibe Coding/SE_Card_predictor/game/game_engine.py Added win streak functionality that increases score multipliers on consecutive correct guesses and resets on an incorrect guess.

I have implemented the Consecutive Win Streak Multipliers.

The `game_engine.py` file has been updated to track a `streak` variable. Now, every consecutive correct guess adds the streak value (1, 2, 3...) to the score, acting as an escalating multiplier. If you make a wrong guess, the streak resets to 0. I also updated the interface so that the streak multiplier is displayed alongside your score.

You can interact with the running game to test it out! Let me know if you would like me to help with the next task.

User

The streak text is overlapping with title, update the code to display Streak right below the score, instead of next to it.

Assistant

Tool: `code_edit`

[Code Edit] file:///Users/ronak/PES_progs/5th_sem_progs/SE_LAB/Lab 4 Vibe Coding/SE_Card_predictor/game/game_engine.py Move streak text below the score text to prevent overlapping with the title.

I have updated the code to render the "Streak: {streak}x" text on a separate line below the score (at y-coordinate 60) so it no longer overlaps with the title.

Let me know if it looks good now and if you want to move on to the next task!

User

The 3rd task is to Implement Tie Evaluation Rules

Drawing a card of identical rank to the current one is currently penalized as a flat loss. Add tie-handling logic that preserves the player's current score and active streak, presenting a neutral "PUSH" notification instead of docking points.

Assistant

Tool: `code_edit`

[Code Edit] file:///Users/ronak/PES_progs/5th_sem_progs/SE_LAB/Lab 4 Vibe Coding/SE_Card_predictor/game/game_engine.py Implement tie-handling logic when drawing a card of identical rank to the current one. PUSH notification is shown and score/streak remain unaffected.

I have implemented the tie evaluation rules in `game_engine.py`.

Now, when a card of identical rank is drawn, the logic enters a "PUSH" state. This preserves both your current score and your active win streak, instead of dropping your points. The interface will also display a neutral "PUSH! [Card] equals [Card]" notification in yellow.

You can try it out in the game! Let me know if you are ready to tackle Task 4.

User

The 4th Task is to Implement side-by-side card reveal animation

The active card currently snaps immediately to the newly drawn card, making rapid comparisons hard to follow visually. Enhance the layout to show the previous and new cards side-by-side with a brief reveal pause before advancing to the next guess.

Update the code to implement the task 4.

Assistant

Tool: `code_edit`

[Code Edit] file:///Users/ronak/PES_progs/5th_sem_progs/SE_LAB/Lab 4 Vibe Coding/SE_Card_predictor/game/game_engine.py Implemented side-by-side card reveal animation with a delay before proceeding.

I have successfully implemented Task 4: the side-by-side card reveal animation!

The logic now introduces a `REVEALING` state which:

1. Briefly pauses the game and disables button input when a choice is made.
2. Moves the previous card slightly to the left and renders the new, drawn card side-by-side to its right.
3. Automatically transitions the new card to the center position after a 1.5-second reveal pause, allowing for clear visual comparison without having to immediately snap.

Please give the updated game a try. Is there anything else you need assistance with?

User

The buttons shouldn't be allowed to press during reveal pause, so that experience is smoother. Update the code to fix this.

Assistant

Tool: `view_file`

`file:///Users/ronak/PES_progs/5th_sem_progs/SE_LAB/Lab 4 Vibe Coding/SE_Card_predictor/game/game_engine.py`

Tool: `code_edit`

[Code Edit] file:///Users/ronak/PES_progs/5th_sem_progs/SE_LAB/Lab 4 Vibe Coding/SE_Card_predictor/game/game_engine.py Visually disable the buttons during the reveal state by graying them out.

I have updated the code to visually gray out the buttons during the reveal pause.

While the actual button clicks were already being blocked in the background during the pause phase, the buttons didn't *look* disabled. Now, their background color, border, and text dim significantly when they are inactive, providing a much smoother and clearer experience.

You can try clicking them or observing them during the reveal phase in your running game. Let me know if everything looks good or if you need any other adjustments before submitting your lab!
